Legal information

Groupe Pilote. Route du demi-bœuf - 44310 LA LIMOUZINIÈRE

SARL with a capital of 20,000,000 euros, registered with the RCS Nantes n° B872 802 780. Siren number: 872 502 780

Remarks

This brochure corresponds to the data known at the time of printing and is in no way a contractual document. Despite the care taken in the production of this document, printing errors are possible. We reserve the right to make equipment changes or product improvements to the current year's models without prior notice. Some of the vehicles are shown with special or optional equipment, which are listed in the relevant price lists and available at an extra charge. The styling and decorative elements used to decorate the images in this catalogue are not part of the vehicle and delivery service. The available payloads are calculated from the difference between the technically permissible maximum weights and the masses in running order. The latter include the vehicle and its structure, furniture and standard equipment; 90% of the fuel tanks, a full bottle of gas and clean water depending on the road tank capacity, empty waste water tanks, necessary fluids, and the weight of the driver at 75 kg. Ensure that the maximum permissible loads are always respected (total and per axle). Please note: Additional equipment and accessories fitted as optional extras are not included in the mass in running order of the motorcaravan. This means that the available payloads and, if necessary, the road space are always reduced. Your dealer will be pleased to inform you about the exact definition of the models available in each country. Before placing your order, please ask your dealer about the current status of the product and the collection. The information on delivery, appearance, performance, dimensions and weight of the vehicle correspond to the data known at the time of printing. These specifications and their tolerances are in accordance with European regulations (Regulation (EU) 1230/2012) and may be subject to change until the vehicle is purchased or delivered.

Technical grid

The manufacturer undertakes to deliver a vehicle whose actual mass in running order is within this tolerance in relation to the mass in running order indicated and retained during the approval formalities. The maximum towable mass is a chassis data linked to the approval of the vehicle. Depending on the coupling fitted to the vehicle and the specific values given by the coupling manufacturer, the maximum mass of the trailer that can be towed by the vehicle may be lower. The strength characteristics of the coupling (in particular D and S values) are engraved on a plate attached to the coupling. The D value is used to determine the maximum permissible mass of the coupling with the following calculation: $MR = DxT / [(9.8xT) - D]$, where : MR = maximum possible mass of the trailer (in tonnes); T = maximum mass (GVWR) of the vehicle (in tonnes); D = value (in kN) to be read on the coupling. Example: with D = 11.3 kN and for a 35 L base, the maximum trailer mass (MR) is as follows $MR = (11.3x3.5) / [(9.8x3.5) - 11.3] = 1.72$ t (or 1720 kg). For a maximum towable vehicle weight of up to 2.5 t.
